

# High-rise residences use 6mm+6mm laminated glass windows to ensure everyone's safety

High-rise residences are always looking for ways to ensure the safety of their occupants. One way they do this is by using laminated glass windows. Laminated glass is made up of two or more sheets of glass bonded together with a layer of film in between. This makes the glass much stronger and less likely to shatter. If the outer layer of glass does break, the inner layers will hold it in place, preventing it from falling and causing injury. This type of glass is often used in windows and doors in high-rise buildings as an added safety measure. Thanks to its strength and safety features, laminated glass is

an ideal choice for high-rise residences.

## The dangers of using regular glass in high-rise residences

Living in a high-rise residence can be a wonderful experience, but safety should always be the primary concern. Regular glass is often overlooked as a risk factor in these dwellings since it is prone to shattering without warning. This fragility can cause serious injury or even death if someone is struck with flying shards of glass on one of the higher levels, where long falls are much more likely than at street level. To ensure the safety of all who live and work in these residences, it is necessary to use tempered glass or laminated glass for windows and other glass applications.

## **How laminated glass is stronger and safer than regular glass**

Laminated glass is becoming an increasingly popular choice for many individuals due to the extra strength and safety it provides. It is created by a process of combining two or more layers of glass together with a plastic interlayer, which holds it all together if the window were ever to break. It is created by a process of combining two or more layers of glass together with a plastic interlayer, which holds it all together if the window were ever to break.

glass windows in high-rise**

# residences

Unlike traditional glass, breaking laminated glass results in small cracks instead of flying shards, ensuring greater protection and security. Although the cost of laminated glass can sometimes be higher than that of regular glass, its stronger and safer attributes make it a worthwhile investment.

[Shenzhen Dragon Glass](#) is one of the leading laminated glass manufacturers in China, dedicated to producing kinds of high quality laminated-glass, flat pvb laminated-glass, curved sgp laminated-glass, laminated tempered glass, laminated heat strengthened glass, laminated facade glass, laminated insulated glass, etc.
