

Brilliant and beautiful 8+8mm colored laminated glass

A new type of glass is making waves in the construction industry colored laminated glass. This thick, durable glass is perfect for high-traffic areas and comes in a variety of colors to suit your building's needs. Whether you're looking for a sleek, modern look or something more traditional, colored laminated glass is a great option.

The coloured PVB laminated glass has been gaining popularity in recent years, especially amongst the design and architecture community. It offers a wide range of hues and textures that are both visually striking and aesthetically pleasing.

How is colored laminated glass made?

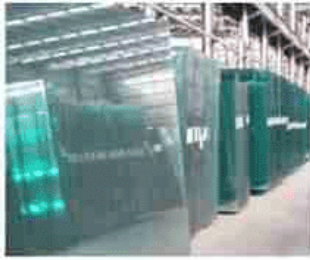

The process of making coloured laminated glass involves several steps. The first step is cutting two pieces of glass into desired shapes and sizes, followed by cleaning them thoroughly to ensure they are free from dirt and dust particles. The second step is applying the PVB film between the two pieces of glass using either manual application or an automated machine that applies adhesive directly onto the glass surface for even coverage. Finally, the two pieces of glass are fused together in a heated press.

Production details of double laminated glass

1. Cut the raw glass material to size;
2. Do the edge works for the cut to size glass;
3. Drill holes if there are any;
4. Tempering process under 600~700 degree temperature;
