

**8mm+8mm clear laminated glass railing, allowing you to have a perfect viewing angle**

## **What is laminated glass□□**

Laminated glass is a type of safety glass that is made up of two or more layers of glass bonded together with an interlayer of laminate material. The laminate material used may be polyvinyl butyral (PVB), ethylene-vinyl acetate (EVA) or thermoplastic. This laminate helps to absorb the energy of impact and to prevent shattering.

## **Advantages of using clear laminated glass railings□**

Glass railings are becoming increasingly popular in modern homes due to their ability to both increase lighting and act as a stylish safety feature. Clear Laminated glass is often used for these railings, providing extra strength and durability while also helping to bounce light through the home. This helps create an inviting atmosphere that can be enjoyed year-round.

With laminated 8mm+8mm clear laminated glass railing, you are able to enjoy a perfect viewing angle with the added safety of laminated glass. Hence, providing extra protection while still providing an unobstructed view. Laminated glass railing is also an excellent choice for sound insulation, providing you with a quieter and more peaceful environment.

# Application:

## **Shenzhen Dragon Glass supplier competitive advantage**

Historical experience: 27 years of glass manufacturing and exporting experience. There are as many as 80 exporting countries, and the export experience is vast.

Quality and Service: High quality, high service level capability.

Price: Great prices and reasonable payment terms.

Production and Shipping: We can guarantee the delivery time and complete the delivery in the shortest time.

Reserve of talents: [Excellent skilled workers, professional sales team.](#)
