decor projects.**

**1, What is 6mm clear
tempered+1.52PVB+6mm clear tempered
ceramic frit glass wall panel?**

Ceramic frit glass is also called silk screen printed glass. It is produced by printing the frit material on the glass through a silkscreen board, to form a certain pattern and designed color. After the printing, the glass will be heated to tempering temperature (around 700 degrees) and combine permanently together with the glass.

Blue color 6mm clear tempered+1.52PVB+6mm clear tempered ceramic frit glass wall panel is using one panel of 6mm clear tempered glass and the other 6mm clear tempered frit glass with blue color to form a “sandwiched” structure with 1.52PVB interlayer. The lamination is undergoing a high temperature and high pressure in an autoclave.

Blue glass wall panel decor

2, What is the advantages for choosing 6mm clear tempered+1.52PVB+6mm clear tempered ceramic frit blue color glass for wall projects?

With 6mm clear tempered+1.52PVB+6mm clear tempered ceramic frit blue color glass wall panels, you can get:
