

# curved temper machine for producing curved glass panels

Mostly tempered curved glass is applied in constructions due to its safety performance, while bend curved glass usually used in work of art or some small vessels.

what are the benefits of using curved glass cost?

1.Splendid thermal insulation performance when it made into insulated curved glass.

2.Soundproofing performance when it made into insulated curved glass.

3.Prevent condensation, reduce cold radiation, and higher safety performance when it made into insulated curved glass.
