

Economical custom reeded glass panels production detail and its 6 applications

Reeded glass is also known as fluted glass, ribbed glass, as a type of decorated glass with a groove.

With different center gaps, reeded glass diffuses varying level of lights, create subtle distortion for limited obscurity, and yet gives an interesting look for every style from traditional to modern.

While reeded glass panels are becoming more and more popular, many customers hope to customize their own reeded glass panels.

Here is a short video to show how we produce custom-reeded glass panels:

Firstly design the patterns as your need in CAD drawing and input them into the computer, later transform the patterns into CNC engraving glass machines. The engraving machines will carve the glass and polish the lines to form the exactly designed patterns.

Our reeded glass panels can custom color, the depth, and width of the groove.

Product Detail□

Advantages :

- Aesthetic and minimalist design
- diverse processing options: can be cut, tempered, laminated, coated
- Three-dimensional texture
- Strong visual impact, creating a better decorative effect.

Specifications:

- **Custom size:** < 2440×5000 mm
- **Thickness:** 5mm, 8mm, 10mm, 12mm, 15mm, 19mm, etc (or custom thickness).
- **Color options:** clear, ultra-clear, tinted, frosted,

colored, etc.

Applications:

- Curtain wall, background wall
- Windows and doors
- Cabinets doors
- Interior and exterior panels
- Entrances and partitions
- Handrails and railings
