

Double glazing with manual sealing

Double glazing with manual sealing. Insulated glass consists of two or more pieces of glass.

The different pieces of glass are isolated through aluminum tubes whose inside are filled with desiccant. The hollow space is inflated with dry air or inert gas and sealed with butyl rubber, polysulphide sealant, or structural adhesive, to form glass with dry space.

Application:

1. Glass doors and windows;
2. Facades and curtain walls;
3. Storefronts and office partition walls;
4. Refrigerator doors, etc.
