

# Écrans de confidentialité en verre sablé de 6 mm de haute qualité

Avez-vous déjà remarqué que certaines surfaces vitrées sont rugueuses ? Ce type de verre est appelé [verre dépoli](#) . Il en existe deux types, le verre sablé et le verre gravé. Normalement, le verre est rugueux d'un côté et lisse de l'autre. Comment est fabriqué le verre ? Découvrons-le.

## Qu'est-ce que le verre sablé?

Le verre sablé est produit en pulvérisant du sable à grande vitesse sur la surface du verre. Cela donne au verre une surface translucide, qui est généralement plus rugueuse que celle produite par gravure. La profondeur et le degré de translucidité de la finition du verre varient en fonction de la force et du type de sable utilisé, puis les motifs et les dessins sont personnalisés.
