

Rimelig bronseglass og 5 typer behandlingsteknikker

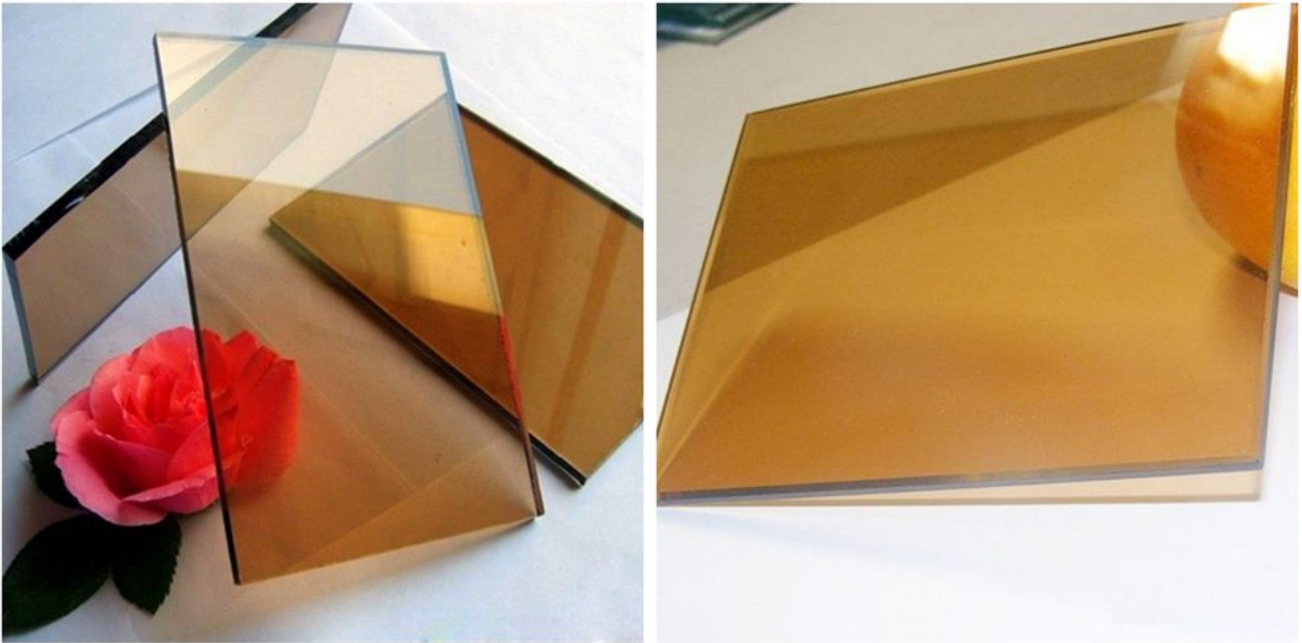

Hva er bronsefarget glass?

Bronseglass produseres ved å endre den kjemiske formelen til glass ved å bruke uorganiske tilsetningsstoffer, og skape glassprodukter med fargeendrede egenskaper.

Denne prosessen har betydelige fordeler, spesielt i tropiske sammenhenger der solvarme og lysstyring er nøkkelen. Farging bidrar til å redusere begge deler, og skaper en interessant visuell effekt eksternt samtidig som personvernet sikres.

Det viktige er at bronsefargen genereres som en del av produksjonsprosessen, noe som betyr at fargen ikke vil brytes ned eller flasse på samme måte som en vindusfilm.

En harmoniserende bronseglassfarge

For et moderne utseende og følelse, vil du ikke gå glipp av det herdede sikkerhetsglasset i bronseglass vi leverer. Det bronsetonede glasset er akkurat det du trenger hvis du leter etter glass som er multifunksjonelt. Du kan dra nytte av den nøytrale estetikken til det tonede glasset og den høye stilen.

Et populært valg for kommersielle strukturer, bronseglass har en varm bronsefarge som tilfører en subtil rikdom til eksteriøret og en varm glød til interiøret.

Vårt spesialtilpassede bronseglass

Bronseglass er laget av det samme høykvalitetsglasset som vi bruker til alle våre produkter.

Vi skreddersyr størrelsen din fra vårt lager av bronseglassplater. Du kan spesifisere form, størrelse, tykkelse, kanttyper, hjørnetyper, og til og med du vil ha et hull i midten!

Du kan også angi om du ønsker å bli behandlet med prosesser som herding, laminert, riflet, syreetsing, varmebløtlegging.
