

Magical 5~12mm one way mirror glass for glass wall glass windows suppliers.

What is one way mirror glass?

The one way mirror glass also called two way mirror glass (transparent mirror), is a kind of mirror that appears a complete reflective appearance on one side but will be visible through the other side. This effect also needs one condition, the light on the reflective side must be very strong and the inspection side shall be weaker or darker light.

For a one-way mirror, you can see nothing from the outside.

The glass is coated with a very thin layer of metal. The result is a mirrored surface that reflects some light and is penetrated by the rest. When one side is brightly lit and the other is kept dark, the darker side becomes difficult to see from the brightly lit side because it is masked by the much brighter reflection of the lit side.

One way mirror product.

How to distinguish if you are facing a one way mirror glass?

You could put one finger on the mirror, if a normal silver

mirror, there will be a gap between your finger and the finger in the mirror, but if you see no gap between the finger and the finger in the mirror, then it is a one way mirror glass.

How to distinguish if a mirror is one way mirror?
