

PDLC windows Smart Glass Transparent Film

We call PDLC film as smart glass, so which sectors are using PDLC glass?

Transportation

Architectural (residential and commercial)

Interior design

Retail advertising

Healthcare (i.e. hospitals and clinics, since the PDLC smart glass can replace unhygienic curtains and blinds which often carry microbes and germs, and this also improves air quality)

Banking, thanks to the privacy afforded to ATMs and as internal partitions

Hospitality, especially bathrooms, since more natural light can penetrate interior spaces lacking windows to the outside world.
