

# Super quality sandblasted glass door panels supplier

## What are sandblasted glass door panels?

Sandblasted glass door is a process in sand material (sometimes iron) and sprayed on the surface of the glass at strong high pressure to abrasive it. Then, it will form a frosted glass effect, which has good functions of decoration and privacy.

# Why sandblasting glass?

Whether it is used for sandblasted glass partition walls and windows, sandblasted glass doors, or bathrooms, sandblasted glass is a good choice, and it is precise because of its transparency and privacy features that it has become more and more popular.

## **Privacy**

The type of glass has a frosted glass effect, the objects and human bodies behind the glass will become unclear, So what you may see are shapes and shadows of objects or people, but nothing more.

## **Saving electricity cost**

For partition walls, glass can provide the same partition function as other materials. The biggest advantage is that it can allow light to pass through instead of darkening the space.

## **Customized designs**

Over the years, this glass design style has been greatly improved. Now you can choose from a variety of custom designs to customize the appearance according to your specific needs.

## **Applications of sandblasting glass**

From the above article, we mentioned that glass can be applied to partitions, windows, bathrooms, doors, etc. Let us take a look at the project pictures.
